

Please consider my request to reject NAB's petition 04-160. We travel throughout the US in our motorhome and rely on XM Satellite Radio for travel and weather information. Often times in advance of when we could expect to get similar information from local broadcasters. The variety and quality of satellite radio is unsurpassed by any of NAB's offerings. We listen to satellite radio almost exclusively and if it were not available, we would be listening to CD's. Most of the local stuff is in our opinion, a waste of time.
